Title :-

Practify

Need Assessment Survey :-

This is the link to the need assessment survey we conducted.

Need Assessment Survey :-

To better understand the real challenges faced by competitive exam aspirants, structured user research, i.e., an online survey, was conducted. The objective was to identify practical problems, emotional struggles, and gaps in current preparation platforms.

Key Insights from Research

1. Confidence vs. Real Exam Performance Gap

Many students feel confident while practicing at home. However, during the actual exam, they experience stress and panic, which negatively impacts their time management and decision-making ability.

2. Lack of Detailed Performance Feedback

Most platforms provide only final scores or rankings after mock tests. Students do not receive deep analysis such as

- Topic-wise weakness identification.
- Speed vs. accuracy breakdown
- Repeated mistake tracking
- Trend analysis across multiple tests

As a result, improvement becomes random rather than strategic.

3. Uncertainty About Readiness

A common question among students was, "Am I actually ready to clear this exam?"

Students struggle to measure real readiness and want a system that clearly shows their progress and probability of success.

4. Post-Written Exam Confusion (CDS/NDA Interview Aspirants)

Students preparing for CDS and NDA expressed major confusion about SSB preparation. They lack structured guidance for:

- Psychological tests
- Group discussions
- Personal interviews
- Officer-like qualities assessment

5. Affordability & Practical Tools

Many students are not looking for more lectures. Instead, they want:

- Realistic exam practice
- Clear improvement strategy
- Practical performance tools

- Affordable solutions

6. Language Accessibility Challenges

A significant number of students, especially from rural and semi-urban backgrounds, expressed difficulty in understanding complex explanations provided only in English. Many prefer learning and practicing in their local or regional language to better grasp concepts and instructions. This highlights the need for local language support within the platform to ensure inclusivity, clarity, and improved learning outcomes.

Problem Identification

Students preparing for competitive exams such as CDS, NDA, GATE, JEE, and NEET often complete their syllabus but are still not fully prepared for the actual exam experience. While they may understand the concepts, they lack exposure to real exam conditions, which creates a gap between preparation and performance.

Most existing platforms mainly focus on teaching concepts through recorded videos or live classes. However, they do not provide realistic exam simulations, real-time pressure practice, stress conditioning, authentic exam-like interfaces, or training in strategic decision-making during the test. As a result, students struggle with managing time, identifying their strengths and weaknesses, and accurately judging how ready they truly are for the exam.

Additionally, many students lack structured guidance on how to solve past papers effectively and do not have peer-based environments to practice and compete with others. They often find it difficult to access reliable and authentic preparation resources, and many prefer simpler, more accessible language, especially students from rural backgrounds. Because of these gaps, even after completing the syllabus, students are not mentally, strategically, or practically prepared for written exams or interviews, including SSB for defense aspirants.

Core Problem

There is no integrated platform that combines:

- Realistic exam simulation
- Interview and SSB preparation
- Peer-to-peer connectivity and learning practice

- Detailed performance analytics
- Structured preparation for both written exams and interviews

Students currently rely on fragmented solutions instead of a single, comprehensive preparation ecosystem.

Target Audience

Main Target Audience:

Students aged 17–26 who are preparing for important competitive exams in India, such as

- Combined Defence Services (CDS)
- National Defence Academy (NDA)
- Graduate Aptitude Test in Engineering (GATE)
- Joint Entrance Examination (JEE)
- National Eligibility cum Entrance Test (NEET)

These are students who are serious about clearing competitive exams and building a strong career.

Secondary Target Audience

Students preparing for interviews and personality-based selection stages, such as

- SSB interviews (for NDA, CDS, and AFCAT aspirants)
- Students preparing for research organizations like ISRO and similar institutions

Project Description :-

This project is a competitive exam simulation and readiness platform made as a website and Android app. It is designed to help students who are preparing for defense exams and higher studies entrance exams. The main goal is to help students become truly ready for real exams by giving them proper practice, clear guidance, and performance tracking.

The platform will create a real exam-like environment. Students will experience time pressure, a proper exam-style interface, and practice making smart decisions during tests. It will provide realistic mock tests, subject-wise and topic-wise performance reports, daily practice exercises, and local language support to make the platform accessible to students from diverse backgrounds. This will help students understand their strengths and weaknesses, manage time better, and track their improvement regularly.

The platform will also include a special section for interview and SSB preparation. This will help defense aspirants improve their communication skills, confidence, personality, and interview readiness. This ensures that students are prepared not only for written exams but also for interviews and further selection rounds.

Basic features will include user registration, exam selection, mock test screens, a performance dashboard, and structured study resources. In the future, features like peer interaction and guided preparation will also be added. The system will safely store user data, test scores, and progress reports so students can clearly see their improvement over time.

Overall, this platform aims to reduce the gap between studying and actual exam performance. It brings together realistic practice, structured preparation, performance tracking, and inclusive learning support in one system to help students build confidence, reduce exam stress, and prepare effectively for both written exams and interviews.

Competitive Analysis

The following major platforms were studied:

- **Physics Wallah** - Known for its affordable pricing and lecture-focused teaching approach, especially for JEE, NEET, and all other competitive exams.
- **Unacademy** - Popular for having star educators and offering courses for multiple competitive exams across different categories.
- **Vedantu** - Focuses on structured live classes and interactive online learning experiences.

- **Motion Education** - Known for its rank-oriented preparation model inspired by the Kota classroom coaching system.
- **BYJU'S + Aakash Institute** - Provides premium digital learning programs with strong branding and large-scale marketing. A well-known coaching institute with a strong offline and online presence, especially for medical and engineering entrance exams.
- **ALLEN Career Institute** - Famous for producing top ranks in JEE and NEET through its structured and intensive classroom programs.
- **Coursera** - Offers academic and skill-based courses from universities worldwide, though not deeply focused on Indian competitive exam simulation.
- **eSaraI** - Focuses on digital content and concept-based learning for engineering and medical aspirants.

Where Existing Platforms Lack

- Limited full exam-center simulation experience and high fees.
- Minimal focus on psychological preparation and exam temperament
- Limited deep performance intelligence and personalized insights
- Weakly structured preparation for interviews and defense selection stages (especially SSB)
- Most platforms focus primarily on content delivery rather than holistic exam readiness

Our Positioning

We are not building another lecture-based platform. We are building India's Most Realistic Exam Readiness Platform, focused on helping students perform better in real exam conditions.

Core Focus

Simulation + Personalization + Readiness

We compete on experience, strategy, performance intelligence, local language support, and peer-to-peer connectivity rather than lectures alone.

Budget

Hardware Costs :-

Below are the estimated hardware-related costs required for development and testing:

1. 2 Laptops (with i7, 16GB RAM, 512GB SSD) – ₹20,000 (estimated rental for project duration)
Required for web and Android development, emulator usage, backend integration, and deployment.
2. 2 Android Smartphones – ₹3,000–₹4,000 (rental)
Required for real-device testing, debugging, and performance validation.
3. JIO WiFi Router – ₹4,000–₹5,000 (project duration)
Required for stable internet connectivity during development and deployment.
4. External Storage (1TB SSD) – ₹5,000–₹7,000 (one-time purchase)
Required for project backup and secure data storage.
5. Power Backup Setup (UPS + Surge Protector + USB Cables + etc) – ₹3,000–₹5,000 (one-time purchase)
Required to prevent data loss and enable safe device debugging.

Software Costs

Below are the estimated software-related costs required to run and publish the platform:

1. Domain Registration - ₹3,000 (estimated)
Web Hosting - ₹600 per month
2. Google Play Console Account - ₹2,000 (one-time payment)
This is required to publish the Android app on the Google Play Store. It is a one-time registration fee.
3. Apple Developer Account - ₹8,200 per year (approx.)
This is required to publish the app on the Apple App Store. This fee must be paid every year to keep the app active.
4. Microsoft Developer Account (Windows Publishing) - Free
There is currently no cost to publish the app on the Microsoft Store (if needed).
5. Firebase Database - Free up to 5 GB
Firebase provides free usage up to 5GB. After crossing the free limit, the cost may range from ₹500 to ₹3,000 per month, depending on:
 - Number of users
 - Data storage
 - App traffic
 - Database reads and writes

Manpower Requirements and Professional Cost :-

Below are the estimated professional costs if the project is developed commercially:

1. Web Developer – ₹30,000–₹45,000 per month
Responsible for website development, backend integration, database management, and deployment.

2. Application Developer (2 Members) – ₹25,000–₹40,000 per developer per month
Responsible for Android app development, feature implementation, testing, optimization, and Play Store deployment.
3. UI/UX Designer – ₹20,000–₹35,000 per month
Responsible for user research, wireframing, interface design, usability testing, and ensuring a clean user experience.

Based on the upper estimated limits, the total development cost of the project may reach approximately **₹1,60,000**. Additionally, recurring operational expenses for database storage, web hosting, and maintaining the application on the Apple App Store are estimated at around **₹10,000 per month**, depending on user traffic and platform usage. These costs ensure smooth platform performance, secure data management, and continuous availability of the web and mobile applications.

Timeline

Phase 1: Research and Planning

- Feb 20 - 25: Plan how the app will work. Create the user flow, basic design layout (wireframes), and navigation structure, and design the Home and Login screens.
- Feb 27: Design the Dashboard, Mock Test interface, and Results screens.
- Mar 4 - 6: Set up the Firebase project. Create login authentication and set up the database (users, tests, results).

Phase 2: Development (Building the App)

- Mar 11 - 13: Build the login, registration, dashboard, and navigation system.
- Mar 18 - 20: Build the Mock Test interface and Performance Dashboard.
- Mar 25 - 27: Set up the Android project, design the app UI, and connect Firebase login.
- Apr 1 - 3: Add the Mock Test screen, Results page, and analytics system.
- Apr 8 - 10: Test the app, fix bugs, improve performance, and polish the design.
- Apr 15: Final review, complete documentation, and prepare the presentation.
